

the stream

ημερολόγιο
journal

The earth's deep cut at the far east end of the city of Serres was once a limit of its territorial expansion. The stream has curved a deep natural track into the earth because of its power and the occasionally heavy floods. The water flow from the surrounding hills and mountains create this verdant narrow valley where leisure and recreation, the phenomena of a peaceful and nature oriented life, are constantly occur forming its identity.

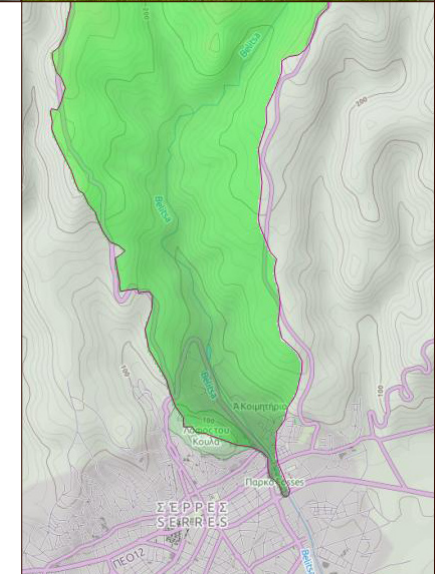

Up in the mountains a heavy storm is about to be burst transforming rapidly our tactics and behaviors of living in the open. We will spent sometime looking in silence the heavy storm giving a name to these moments. We will stay under our heavy and shadowy shelter looking at the clusters of trees shaking violently and the water running to a nearby natural channel leading its flow to the valley far away.

We do have a shelter. We do have a community. We do create and are willing to sustain a network of collectively working visionaries aiming to create, to design, to illustrate one and many outcomes of our common ideas that will provoke people to rearrange their lives. To ask for more. To build new connections with the ongoing type of global civilization. A civilization standing firmly and respectfully to this new and well spread ideology of an equilibrium between the man made technical civilization and the overall environment.

We have already manage to write and design the first and the many words and sketches. Spread their meaning and their possibility to its other.

We except.

We unite.
