Urban & Architectural Design Workshop

Hansaviertel Berlin (INTERBAU 1957)

>>> new strategies for the organic city

The workshop will take place at

ANCB/The Aedes Network Campus Berlin_Metropolitan Laboratory

Christinenstr. 18 – 19, 10119 Berlin

www.ancb.de

>>> Erasmus+

objective & description

The workshop project **Hansaviertel Berlin (Interbau 1957)** will connect with the concept of Organic Architecture & Design in order to develop new perspectives of interdisciplinary conceptual learning. Through crisis, experience and scientific exploration we have learned that we need to maintain an organic relationship with nature if we want to cultivate a sustainable and humane society, a liveable environment and healthy cities.

The quest for an urban life model that will balance the qualities of the city with the advantages of life in nature dates from the end of the 19th century. In Hansaviertel, Berlin such a model has been constructed during the 1957 IBA. Fourteen prominent architects (among them Aalto, Bakema, Le Corbusier, Gropius) were invited to design individual buildings located inside a planted landscape. This “ideal neighborhood” remains today an integral part of the city of Berlin.

How can we perceive Hansaviertel today? The workshop will offer a platform for design collaboration and discourse to a group of 35 students who will be working in 5 international teams on new perspectives for organic architecture and landscape urbanism in times of transformation.

methods & outcome

Lectures, panels, site visits and table work will be the main activities of participants investigating and identifying collaboratively the potentials of the project area. Possible scenarios of architectural and urban development have to be defined, respective representations to be worked out and prepared for exhibition and final review. The result will be accredited with 3 ECTS.
